

UTC2 Crane Tires

The UTECH UTC2 is the ideal tire for cranes that are frequently used in off-highway applications, where the tires are required to offer excellent traction and long wear life. The tread pattern of UTC2 provides exceptional lateral traction and self-cleaning characteristics in off highway applications, and it also enables stable performance and smooth ride on highway.

Parts Details Of UTC2 Crane Tires

Excellent traction, self-cleaning capability, good mobility and flotation

- UTC2 is engineered with non-directional extra deep tread and open shoulder grooves that jointly contribute excellent traction, self-cleaning capability, good mobility and flotation.

Increased wear life and cut resistance

- The extra deep tread provides increased wear life and cut resistance.

Improve the high speed capability in long-distance traveling

- The extra deep tread provides increased wear life and cut resistance.
